

# High Level Document

## 1. General Description

### 1.1 Problem Statement:

Create a dashboard to present the analysis about any realistic scenario.

Example: healthcare, education, industry, banking etc.

### 1.2 Expected outcome:

1. Data should be collected to perform the analysis and any assumption made during data gathering must properly documented.

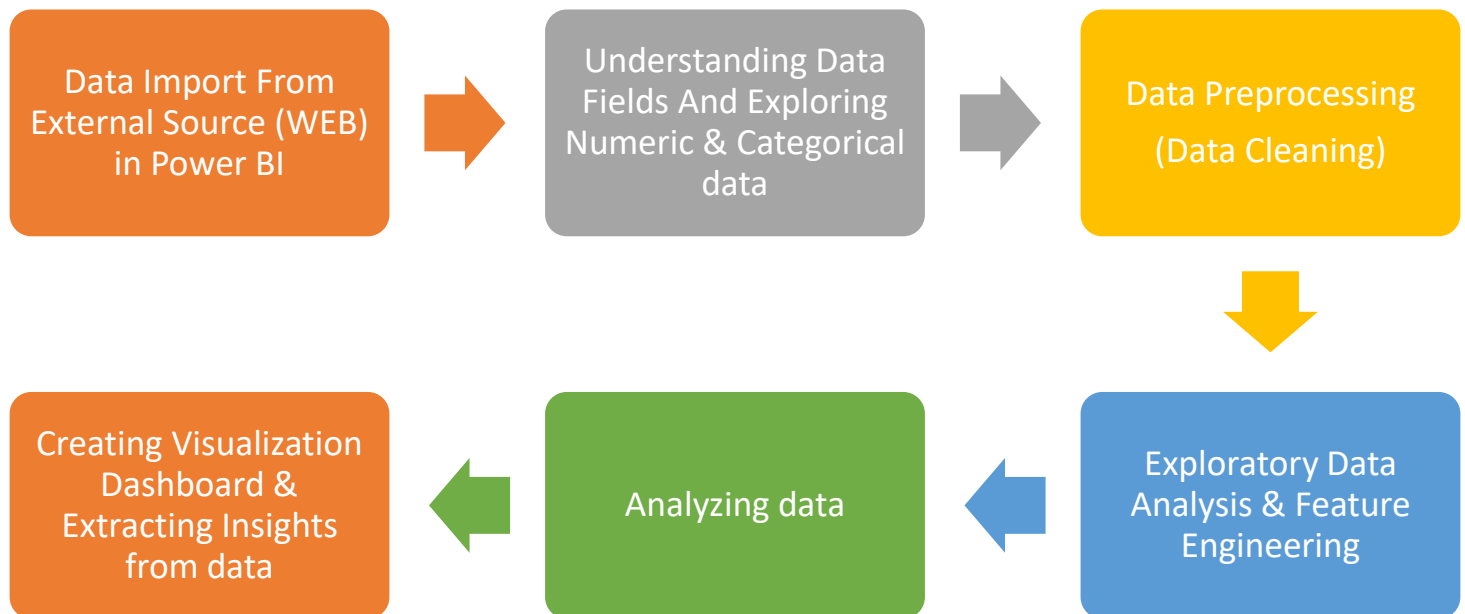

2. Dashboard should provide comprehensive insight regarding analysis made by you with proper explanation.

### 1.3 Tools Used:

Power BI Software

## 2. Process Flow

### 2.1 Process Flow

### **3. Dashboard**

The Dashboard will be helpful to display and indicate certain KPIs and relevant information to understand the financial detailing and customers classification. Which can help to make better business decision.
